

In a world filled with challenges, there are stories that tug at our hearts. Meet Amaan, a brave and resilient 3 and a half year old boy, battling an unusual battle with Malignant Granular Cell Tumor of Testis. Despite his tender age, he faces the fight of his life. Today, we come together to make a difference and extend a helping hand to Amaan and his family. We humbly request your generous contributions towards arranging the much-needed medicine and treatment for this little fighter.

Amaan is Suffering from MGCT of Testis

Amaan's medical documents are mentioned in this file, please go through them and come forward to donate for the medication of this child.

**Histopathology Report**

**Report Findings:**

Specimen labelled as scrotal mass measures 2.2x1x0.6 cm.

Sections examined show fibrocollagenous and fibroadipose tissue, with moderate chronic inflammatory infiltrate composed of sheets of foamy histiocytes, giant cells and hemosiderin laden macrophages.

Separately lying necrotic tissue fragments are also identified.

No granuloma is noted.

PAS-D / SM stains does not show any fungal profiles.

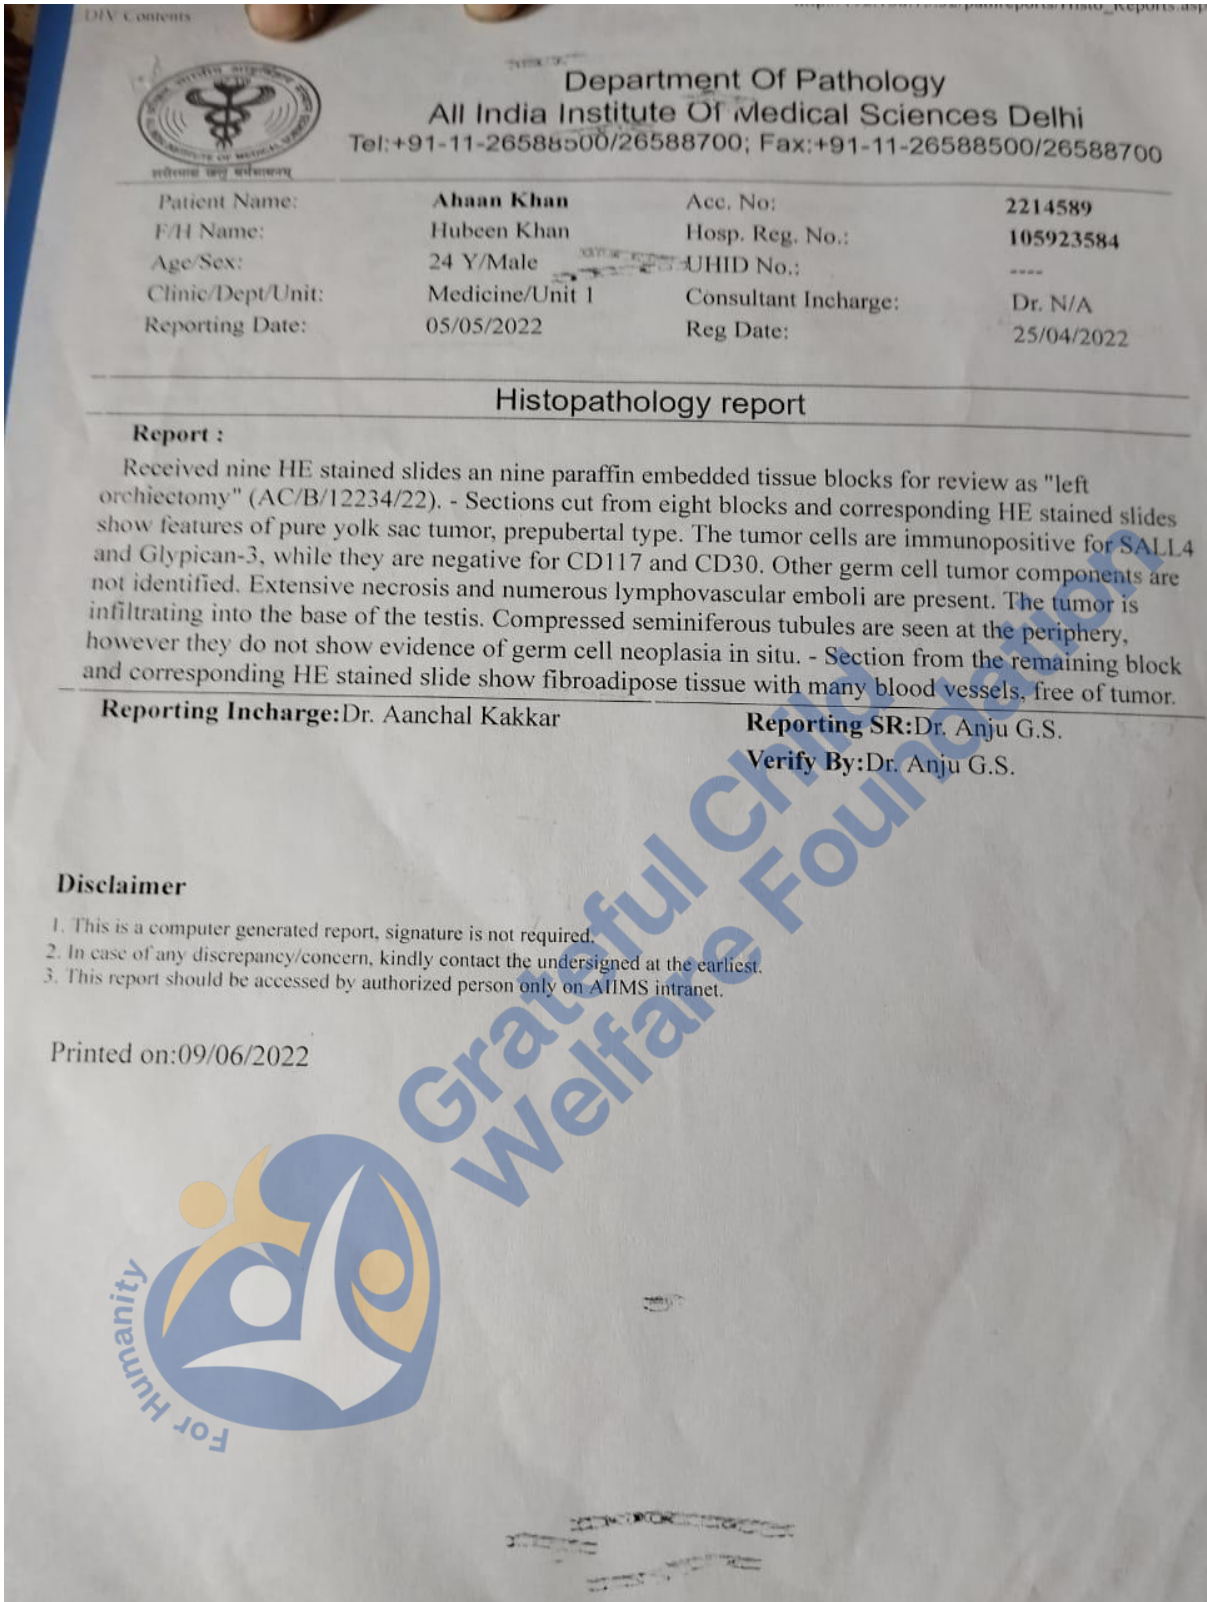

There is no evidence of malignancy in the sections examined.

Immunostaining for SALL4 is negative.

**Histopathology report**

**Report :**

Received specimen labelled as 'left scrotal mass' measures 3x3x0.5cm. Multiple sections examined showing fibrocollagenous tissue showing foreign body giant cells and sheets of histiocytes. In addition, few residual tumor cells are noted arranged in sheets having clear to eosinophilic cytoplasm and inconspicuous nuclei. The tumor cells are immunopositive for pancytokeratin, EMA (patchy) and glycican-3 (patchy). The tumor cells are negative for CDX2 and CD30. Overall histomorphological features and Immunohistochemistry consistent with a yolk sac tumor;(recurrent vide clinical history).
